BI BidIntell

The bid intelligence platform for commercial construction.

Score every opportunity before estimating starts. · Build intelligence from every decision. · Know which clients are worth pursuing.

GO · REVIEW · PASS in under 60 seconds — personalized to your trade, region, and client history.

Commercial launch April 2026	Subs · Distributors · Mfg Reps	In construction since 2003
bidintell.ai	Who it serves today	Founder-market fit

THE PROBLEM

Commercial subcontractors waste hours deciding which bids to chase — and money on takeoffs they should never have started.

Hours wasted before a number is run

The average go/no-bid decision takes 1–2 hours without a system. BidIntell does it in minutes — before a single takeoff hour is spent. Multiply that across 40+ bids a year and it's a real number.

Contract risk buried in PDFs

Pay-if-paid clauses, uncapped liquidated damages, vague scope language — all buried in 200-page packages. Most subs never read them before committing estimating hours.

No institutional memory

Every estimator has a mental list of which clients are worth bidding. That knowledge lives in their head and walks out the door when they leave.

Subs win roughly 1 in 5 bids they price. At 1–2 hrs per go/no-bid decision and 40+ bids/year, that's 40–80 hours annually just deciding — before estimating starts.

THE SOLUTION

A structured go/no-bid decision — before any estimating time is invested.

GO BidIndex Score

83

0 100

Medical Office Renovation
ABC Subcontractors · Overland Park, KS

How the Score Works

Location Fit Distance from your HQ · service radius	30%	92
Keywords & Contract Keywords · clause detection · risk penalties	25%	78
GC Relationship Win rate · star rating · bid history	25%	75
Trade Match CSI section codes · scope signals	20%	88
Competitive Pressure Activates after 3 outcomes logged against a GC	10%	LOCKED

Weights are user-defined — no two companies score the same bid the same way. Presets: Relationship-First · Risk-Averse · Trade Specialist · Market-Volume.

Built, shipped, and in use. Not a prototype.

PDF + Email Analysis

Upload or forward any bid invite. AI extracts scope, contract terms, and risk clauses in under 60 seconds.

BidIndex Score (0–100)

Personalized fit score across 5 components. GO · REVIEW · PASS before a single hour of estimating is spent.

Contract Risk Detection

Flags pay-if-paid, uncapped liquidated damages, vague scope, and compressed timelines — before you commit.

Outcome Tracking

Log Won / Lost / Ghosted / Passed / No Bid. Every outcome makes the next recommendation more accurate.

Also included: Client intelligence across 7 client types · Competitive Pressure Score (activates after 3 outcomes) · Team accounts · Email forwarding

Three segments. One platform. All open today.

OPEN NOW

Commercial Subcontractors

Primary ICP — where we start

Mechanical, electrical, plumbing, drywall, flooring — any trade bidding commercial projects. Lead estimators and owners at firms doing $2M–$20M. Starting in Kansas City, expanding from there.

- Go/no-bid decisions before takeoff starts
- Track outcomes and build win-pattern data
- Institutional memory that survives staff turnover

OPEN NOW

Distributors & Suppliers

Material distributors and suppliers who quote commercial projects face the same qualification problem. Same workflow, same scoring logic — different product catalog.

- Same core problem: which quotes are worth pursuing
- Track which GCs actually award to new suppliers
- Natural expansion from the sub network

OPEN NOW

Manufacturers' Reps

Reps submitting pricing for manufacturers face similar decision fatigue. Which specs get selected, which GCs value their products, where to focus effort.

- Same intelligence model, different workflow
- Spec selection tracking by client and region
- Downstream from the sub network we're building

Long-term platform vision: a two-sided market connecting verified subs with GCs. Trigger: 500+ subs, 2,000+ client data points. Not today's focus.

Generic AI can read a PDF. The advantage is what accumulates when estimators score bids, log outcomes, and refine decisions over time.

STARTS DAY ONE

Outcome Data

Every logged outcome — win rate, margin, bidder count, decline reason — is data that has never existed in structured form for specialty subcontractors.

Win rates · Margins · Bidder counts · Decline reasons · Ghosting patterns

BUILDS OVER TIME

Client Intelligence

User-labeled client responsiveness, ghost rates, payment notes, and scope clarity per client. Starts sparse — becomes irreplaceable. The longer a company uses BidIntell, the harder their account is to replicate elsewhere.

Ghost rate · Client responsiveness (user-labeled) · Payment notes · Scope clarity

REQUIRES SCALE

Cross-User Benchmarks

Anonymized win rates per client × trade × market. The product gets smarter as more subs contribute outcomes. A network effect that requires user volume we are building toward.

Win rate per GC · Competitive density · Market benchmarks

The advantage is not just AI scoring. It is the proprietary workflow data created when estimators use the product consistently over time.

Every bid scored and outcome logged makes the next recommendation better.

1. **User scores a bid**
   AI extracts project details, applies personalized weights
2. **BidIndex gives recommendation**
   GO / REVIEW / PASS calibrated to their trade, clients, and risk tolerance
3. **User logs outcome**
   Won / Lost / Ghosted / Passed / No Bid — margin, bidder count, decline reasons
4. **Intelligence layer improves**
   Client behavior profiles update · Competitive Pressure activates · Margin Posture builds
5. **Next recommendation more accurate**
   User trusts the score more → logs outcomes more → moat compounds

What Unlocks As Usage Grows

≥3 outcomes / client
→ Competitive Pressure activates

≥20 total outcomes
→ Project Twin Finder is useful

≥50 total outcomes
→ Override patterns surface

≥10 active accounts
→ Cross-user benchmarks begin

500+ subs · 2K+ outcomes
→ Two-sided market becomes viable

Where We Are

- Commercial launch — April 2026
- Beta usage confirmed the core workflow
- Beta insight: estimators want structured go/no-bid, not just faster takeoffs
- Paid plans now live · 7-day free trial
- Founding member pricing for life: FOUNDING30
- Immediate goal: first paying commercial subcontractors
- GTM: direct outreach + demo calls via Founder Network
- BOOST accelerates buyer-side validation + distribution we cannot get alone

In commercial construction since 2003 — built BidIntell because this tool didn't exist when he needed it.

Pricing

Solo — $49/mo

1 seat — $470/yr

Unlimited analyses · BidIndex Score · PDF + email · Outcome tracking · Contract risk

Team — $99/mo

Up to 3 — $950/yr

Everything in Solo · Shared client database · Email forwarding · Team analytics

Company — $179/mo

Up to 8 — $1,720/yr

Everything in Team · Company-wide reporting · Priority support

Annual billing: save 20% · Enterprise: 9+ seats, custom contract

Four phases from scoring tool to construction intelligence platform.

1

Core Platform

LIVE NOW

→ AI bid scoring (GO/REVIEW/PASS)

→ 5-component BidIndex Score*

→ User-defined weights + 4 presets

→ Contract risk detection

→ Outcome tracking (5 types)

→ Win/loss analytics dashboard

2

Stickiness Layer

NEAR TERM

→ Automated GC follow-up sequences

→ Bid pipeline / Kanban view

→ Override capture + recalibration

→ Client behavior cards

→ Project twin finder

3

GC Intelligence

SCALE

→ Crowdsourced ghost rates + client reputation scores

→ Competitor tracking by project type

→ User-defined ghost timeline (default 60d)

→ Cross-user win-rate benchmarks

→ Anonymous aggregate benchmarks by trade

4

Platform + Data Products

PLATFORM

→ Labor capacity index by location/trade

→ Two-sided market (GC network access)

→ Plan room API integration (BuildingConnected, PlanHub)

→ Estimating + takeoff software API (Togal.ai, Stack, On Center)

→ Capacity vs. pursuit portfolio view

** 5-dimension BidIndex is live — activates automatically as outcome data accumulates*

We need validation and distribution. Suffolk can provide both.

01 Problem Validation from the Buyer Side

BidIntell is built for subs — but the data it collects is about GC behavior. Suffolk operates as a major GC and can help us validate whether the problem we're solving (subs avoiding low-quality clients) maps accurately to what GCs actually experience on their end.

02 Autodesk & Procore Ecosystem

Both are BOOST partners. Our Autodesk ISV application is in appeal. BOOST relationships accelerate those conversations — and Procore's subcontractor network is a potential future distribution and benchmark channel.

03 Customer & Channel Introductions

BOOST's operating partners include specialty contractors, distributors, and construction companies — our exact ICP. A warm introduction from Suffolk cuts through to buyers who don't respond to cold outreach and won't trial software they haven't heard of.

04 Category Credibility

We are creating a category — pre-estimating bid intelligence — that does not yet exist as a recognized product type. BOOST's built-world network provides the credibility and feedback to validate whether this framing resonates with buyers beyond our immediate market.

BI BidIntell

We've launched the product and proven the workflow. Now we scale it.

BidIntell is live, tested with early users, and ready for its first paying customers. We need the right design partners, validation, and distribution to turn an insight into a category-defining construction platform.
